YOUR SMART ADVANTAGES

- Intumescent fire resistance for interior joints and penetrations
- Up to 4 hour fire rating\(^1\)
- Fire resistance tested in accordance with AS1530.4-2014 and AS4072.1-2005
- Fire rating for gaps up to 40mm
- Acoustic capabilities with a 67 STC\(^*\) rating in plasterboard construction
- Good flexibility with up to ±25% joint movement
- Smooth gunning and tool off
- Low odour and non-toxic
- Water clean up
- Prevents passage of hot gases
- Paintable after 24 hours at 20°C
- Water resistant after cure (7 days after application)
- Acoustic capabilities with STC rating in plasterboard construction
- Helps prevent the spread of fire and smoke through walls and floors
- Excellent adhesion to metal, wood, plasterboard, all masonry, AAC and Hebel

USES

- Interior use only
- To prevent the spread of fire and smoke through walls and floors Sealing of gaps around pipes, cables, ducts and services which penetrate fire rated walls and floors.
- Fire rated cable penetration in concrete and masonry.
- Installation of fire rated sealant in concrete walls and floors.
- For vertical and horizontal low movement joints (up to ±25%).
- Application requiring acoustic properties or STC (Sound Transmission Co-efficient) rating.
- Perimeter sealing of door and window framing.
- Sealing gaps between faced and cladding panels to various building materials.
- For new construction and remedial applications.

\(^1\)The sealant will deteriorate if subjected to high temperatures and/or humidity on a continuous basis.
\(^2\)Rating dependant on overall wall system configuration.
\(^3\)Specific joint/penetration design required.

DIRECTIONS FOR USE

Read and understand the Safety Data Sheet before using this product.
Refer to Firecaulk Manual for joint and penetration design.
The joint depth must allow a sealant depth, after installation of backer rod or bond breaking material, of a minimum of 6mm.
Lap shear joints should have a bead width equal to, or greater than twice the anticipated movement.
A conservative design practice, which uses a portion of the sealant’s movement capability as a safety factor is recommended.

SURFACE PREPARATION

Clean all surfaces by removing foreign matter and contaminants such as oil, dust, grease, frost, water, surface dirt, old sealants and any protective coating.
Firecaulk

Porous substrates should be cleaned by grinding saw cutting or blast cleaning (sand or water). Dust, loose particles, etc. should be blown out of joints with oil free compressed air or vacuum cleaned. Non porous and plastic surfaces should be cleaned by solvent or mechanical means. Cleaning solvents should not be allowed to air dry or evaporate without being wiped with a clean, dry cloth. Priming is not required unless surface to be bonded is in poor condition or exceptionally porous. Consult Bostik for advice on priming.

APPLICATION

- Joint design must conform to manufacturer’s recommendations and NZBC requirements.
- Compatible closed cell backing rods or release tape must be used to ensure two sided adhesion in joints and limit joint depth.
- Firecaulk should be dispensed from either the cartridge or sausage by means of a caulking gun.
- Cartridge – cut the tip off the cartridge and screw on the nozzle. Cut nozzle to give the required angle and bead size. Place the cartridge in a Bostik applicator gun and squeeze the trigger.
- Sausages – a barrel gun is required, clip the end of the sausage and place in barrel gun. Screw end cap and nozzle on to barrel gun. Using the trigger extrude the sealant, to stop depress using the catch plate.
- Apply Firecaulk in a continuous bead using enough pressure to properly fill the joint.
- Tool off surface of sealant with an appropriate sized spatula or trowel.
- Apply sufficient pressure to leave a smooth, consistent surface and ensure maximum contact with the interface of the joint.
- Tool sealant to ensure correct shape and ensure good product contact to all surfaces.

LIMITATIONS

- Firecaulk is not recommended for water immersion, exposed external joint sealing or areas subject to heavy traffic.
- Firecaulk should not be applied with wet tooling techniques using solvents, water or detergent/soap solutions.
- Firecaulk should not be applied to surfaces with special protective or cosmetic coatings without prior consultation with the manufacturer. Such surfaces include, but are not limited to, mirrors, reflective glass, or surfaces coated with Teflon, polyethylene or polypropylene.
- Firecaulk can be affected by water before or during cure. The sealant should not be stored, applied or cured in areas where unusually high humidity or free water are present during the application or initial cure.
- Firecaulk should be allowed to cure for 7 days prior to subjecting to any intermittent water exposure.
- Do not apply to surfaces with temperature under 5°C.

CLEANING

Water while wet, or Bostik No. 3 Solvent or White Spirits when dry. Use Bostik Handy Wipe towels to remove adhesive from skin.

PAINTABILITY

Firecaulk is fully paintable after full cure. The use of a premium quality acrylic based primer is recommended.

STORAGE AND SHELF LIFE

Store in cool, dry conditions out of direct sunlight between 5 and 27°C. Protect from freezing and frost. Shelf life is 12 months if stored in cool, dry conditions in original, unopened containers.

DISPOSAL

Empty containers, once dry, may be disposed of via local landfill. If spilt absorb product with clay, sand or earth. Collect in properly labelled metal containers. Dispose of according to local authority regulations. Do not dispose of down drains or into waterways. Fully dried material is not hazardous.

PRECAUTIONS IN USE

Complete details on each of the products mentioned are available on the product Safety Data Sheets. To ensure no harm is caused to persons using Bostik products, it is recommended that all concerned read the appropriate Safety Data Sheets. Visit www.bostik.co.nz for copies.

FIRST AID

Swallowed: Do not induce vomiting, give a glass of water and contact a doctor immediately.
Skin: Remove contaminated clothing, wash with warm soapy water. Do not scrub.
Inhaled: Remove person to fresh air. Get medical advice if breathing becomes difficult. If inhaled to excess, remove from contaminated area – apply artificial respiration if not breathing.
Eyes: Hold open and flood gently with water for at least 15 minutes. Get medical advice.

For emergency information contact the National Poisons Information Centre, phone 0800 764 766 (0800 POISON) or CHEMCALL, phone 0800 243 622.
